

# SYSTEMS MAINTENANCE SCHEDULE

Created: 1/31/2007      Reviewed: 3/2008

Campus Technologies maintains over 35 servers in our Network Operations Center serving our faculty, staff, and students with a variety of applications and network-based services, including such deliverables as email, web service, student information system, desktop applications, authentication service, and others. Each of these servers is critical to the campus community and requires maintenance time for backups, updates and patches to the operating systems, and database upgrades. In addition, the network staff maintains a wide array of equipment connecting the network center to all of our campus buildings and to the network beyond our campus.

To minimize the campus-wide downtime while essential maintenance is performed on our servers and equipment, Campus Technologies has set aside the following maintenance schedule when any or all of the networked servers/connections may be unavailable. We will attempt to limit our scheduled maintenance to these windows and may not require all time scheduled in any given day. **Users should plan their activities around these scheduled times as having systems unavailable.**

**Sunday evening: 6pm to midnight**

**Daily: 5am to 6am**

As with any computing systems, there will also be unscheduled outages in times of electrical outage or other unforeseen emergencies. We will always attempt to give as much notice as possible when outage occurs outside the scheduled window.
