The Mansfield Campus Technologies mission

The Mansfield Campus Technologies Division (CT) promotes, develops, acquires, installs and supports technology and enabling applications for students, faculty, and staff through group and individual initiatives on campus and in the region.

We do this by promoting effective teaching and learning, leadership, providing professional development, providing accurate student and University information, and fostering community relationships through our service.

We provide leadership in the application of information technologies through resource deployment and operations to build an effective teaching and learning environment.

We provide efficient, dependable, and secure information technology infrastructure and develop and maintain effective information systems and tools to provide services to each student, faculty, staff, and alumnus.

We promote community interaction by building and maintaining communications through the acquisitions and support of technology.

We work to ensure quality faculty and staff through training opportunities and make student success our central focus. We ensure financial stability with efficient technology infrastructure and purchases. Via our web site, we make leadership development our signature. By regularly assessing our service, we work toward continuous improvement. By providing up-to-date technology, we create a safe and sustainable environment to support learning.
